

EURES

EUropean Employment Services

Servizi Europei per l'Impiego presso i Centri per l'impiego

Per lavorare in Europa - Eures è una rete per facilitare la mobilità e lavorare nei paesi dello Spazio Economico Europeo.

E' un servizio gratuito per i cittadini comunitari che cercano lavoro in Europa.

Consulta il portale <http://ec.europa.eu/eures/> per avere informazioni sulle caratteristiche di ciascun paese, sulle condizioni di vita e di lavoro. Potrai visionare tutte le offerte di lavoro disponibili nella banca dati internazionale. E potrai registrare on line il curriculum vitae e consentirne l'accesso a datori di lavoro di tutta Europa.

Per qualsiasi ulteriore informazione in ogni Centro provinciale per l'impiego troverai un referente Eures a tua disposizione.

Riferimento	EURES Svizzera - rif. 85/2019
Mansione	Computational Systems Biologist - EURES Svizzera - rif. 85/2019
	<p>The Company</p> <p>STALICLA is a fast-growing start-up company active in the field of Autism Spectrum Disorder, a disease area with high unmet medical need. The CEO and Management team's vision is to synthesize and capitalize on interdisciplinary approaches and existing pharmacology to serve patients who live today. The addressable market for ASD is large with prevalence estimates ranging between 1 and 1.5% in Europe and North America.</p> <p>STALICLA has initiated the development of specific methodologies based on computational biology and endopharmacology to fast track personalized medicine for patients with Autism. Recently, the company has validated in the clinic its in silico defined endophenotype and corresponding first in class bioprofile. The company has put together a knowledgeable and highly engaged executive team, and a world class scientific committee to guide the development process of its drug development program as well as the growth of the company. Furthermore, the company has signed collaborations with leading institutions in the field, which will provide significant platforms to enhance the clinical programs and accelerate the product development process. Additionally, the company has been able to develop a strong IP strategy to protect its assets and has secured sufficient funding to advance through initial clinical phases.</p> <p>Background</p> <p>STALICLA is expanding on its R&D effort by launching a dedicated computational systems biology unit in Barcelona. The research and development unit of STALICLA in Spain embarks on the identification of subgroups of patients based on genetic, phenotypic and clinical factors, integrating molecular, anatomical and medical data. Through big biomedical data analysis, the research unit aims to exploit compounds that are already on the market or in the advanced stages of clinical trials to offer treatments tailored to patients in each subgroup. The fundamental elements of the project are the computational analysis of omics data (proteomics, genomics, transcriptomics, metabolomics, etc.) and personalized systems medicine. This analysis involves statistical modeling and machine learning centered on the biology of diseases, comorbidities and pharmacology.</p> <p>Position</p> <p>Title: Computational Systems Biologist Location: Barcelona Work type: Permanent Salary: Competitive - depending on experience and profile- Participation in the company's option plan Candidates living Barcelona or EU and able to relocate rapidly would be preferable.</p> <p>The Role</p>

	<p>The computational systems biologist will work closely with the other members of the unit and contribute to the design, implementation and the analysis of computational models and algorithmic approaches towards the characterization of "targetable" molecular, genetic and clinical features in neurodevelopmental disorders.</p> <p>The Person</p> <p>The ideal candidate will have outstanding track record on computational biology and systems medicine, coupled with practical experience in machine learning, translational bioinformatics and drug repurposing in neurodevelopmental disorders or a related field. S/he is expected to track record in the analysis and visualization of omics data with an emphasis on the systems-level understanding of disease pathology.</p> <p>Desired skills & software:</p> <ul style="list-style-type: none"> - Scripting languages (and relevant packages): R, Python - Biological and network data visualization: Cytoscape, Gephi - Database: MySQL, Neo4j, MongoDB or equivalent - Other: Linux, Git, Inkscape, Photoshop, (Libre)Office tools <p>Desired capabilities:</p> <ul style="list-style-type: none"> - Build computational pipelines to process, integrate, analyze, summarize and visualize large scale interconnected biomedical data including but not limited to genomics, transcriptomics, proteomics, metabolomics, clinical, and pharmacological data. - Contribute to the strategical planning and development of new and existing projects and generate high quality documentation of materials, methods, software and analysis results. - Have a solid understanding of molecular data analysis (i.e. quality control, normalization, clustering, differential expression, pathway enrichment), feature engineering and prediction model validation. - Knowledge on widely used biological data resources (such as UniProt, GWAS catalog, Reactome, UMLS) and disease ontologies. - Previous experience on pharmacological data analysis and drug repurposing is a plus. <p>In addition, the candidate is expected to have:</p> <ul style="list-style-type: none"> - A high comfort level working in a high paced start-up environment, where a pragmatic, resourceful, well organized and effective approach is required with limited resources - A hands-on, decisive approach and a proven ability to work independently and as a team player - Excellent communication skills - A passionate, energetic and enthusiastic personality that will ensure commitment to the company and its vision <p>Contact: info@stalicla.com and cc: eures@afolmet.it</p>
